## New Multi-Purpose Loading Press

Corbin, the bullet swage die-makers, are offering a newly designed hydraulic/electric power press called the Hydro Junior™. Similar in appearance to the Corbin Hydro-Press™ used by nearly all custom bullet makers in 22 countries for the past two decades, the “Junior” model is priced at \$2000 less (\$3950 versus \$5950). It has the same power to extrude lead wire, swage bullets from .22 caliber to as large as 1-inch diameter, or reload ammunition from the smallest pistol calibers to 20mm cannon shells.

The difference is in the provision for automation and electronic control of the ram position and stroke. The Hydro Junior™ uses two-hand push-button controls, with two adjustable position controls, top panel adjustable drive pressure, and a precision glycerine-filled pressure gauge. The Hydro-Press™ adds automatic stroke program control, electronic dwell timing, loading station stop point, additional pressure transducers and interfaces for control of Corbin copper strip feeders and jacket drawing heads.

The Hydro Junior™ is designed for gun clubs, individuals who want to start a part-time home or retirement business (making custom bullets), or as a starting power press for gun shops expanding into the custom bullet and ammunition market. For further information, contact Corbin at PO Box 2659, White City, Oregon 97503 (phone 541-826-5211 Monday through Thursday, fax 541-826-8669, e-mail to [corbin@corbins.com](mailto:corbin@corbins.com)). Further details can also be seen on Corbin’s extensive web site at <http://www.corbins.com>.
