

**The dies/punches in this package are type**

- R** (for reloading press)
- M** (for Silver or Series II press)
- S** (for Series II press only)
- H** (for Hydro-Press or Mega Mite)

**Please be certain to specify the TYPE if you order additional punches or dies or request information regarding the capabilities or use of the items.**

Type -R external punches fit into the slotted ram of a reloading press. Type -R internal punches fit inside the threaded die holder body. External punches of type -M, -S, and -H all fit into a floating punch holder in the appropriate Corbin press head. Internal punches of type -M, -S, and -H all fit into the die, which screws into the top of the Corbin press ram. Type -S internal punches are longer than type -M. The only punches which interchange with each other are the type -M External, and the type -S External. All others must be used in the same type die. Type -S or -M external punches from .40 caliber and up have a captive hex bushing.
